

Too Many Projects

Super-Regen FM Radio

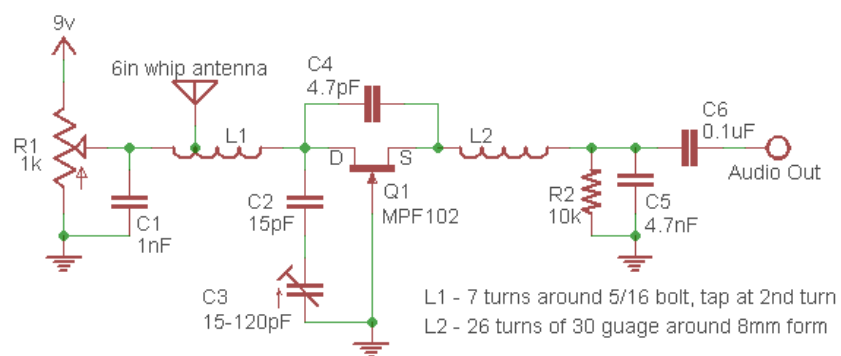

This is one of my favorite radio builds just because of how simple it is and still gets stations. It's called the [Radio Shack Special](#) which is based off a more popular design by Charles Kitchen. Only the receiver portion is shown, an LM386 amplifier is off to the side. It takes a little tweaking to get a station, especially with that little trim cap, but it can pick up a lot of stations.

A sample from the local classical station:

Vm
Radio- 00:00R
Classical

You can get the full details at the link above but here is an easier to read schematic of the receiver portion.
